

Burson Ezyparts Integration

Overview: Version 3.6.1 introduces the ability to allow importation of parts data to the job card directly from the Ezyparts catalogue. Automation Premium links vehicle data to the catalogue so when you open Ezyparts providing the vehicle information can be interpreted you can use the view option in Ezyparts to locate the vehicle from a WIP list to locate parts that are applicable to the specified make and model.

Ezyparts Setup: To setup your Ezyparts link you will firstly need to download a copy of the application from Bursons Auto Parts from <http://www.burson.com.au/ezypartsezypartsinstall>, this needs to be authorised to be able to function. Once you have done this you next need to establish the link between Automation and Ezyparts. From the top of screen go to File / Site Settings / Online Settings in the centre of screen you will need to enter your Ezyparts credentials.

Repco COVS **Burson**

EzyParts

☒ Enable EzyParts Integration

Site code: 630996W

Server: test.autoinfo.com.au

Terminal ID: 013008

Site Messages

☐ Enable site messages for this database

☐ Check for site messages on this machine

Remote Group

Add

Remove

☒ Check for remote requests on this machine

Remote Bookings

☐ Check for remote bookings on this machine

Once these have been entered you will see an Ezyparts icon on the task bar below the parts and labour section of the job card. Note: You can only establish your connection from the job as we have to send Ezyparts the vehicle information.

Ezyparts, Linking: To import catalogue items from Bursons firstly you need to go to the job card and select Ezyparts this will open a screen indicating that the job is waiting for a parts importation – **DO NOT CLOSE THIS WINDOW**, leave it on screen and select the Ezyparts application icon from the bottom of your Windows screen, this opens the application.
